Text results: the repaired mode matches the baseline

100 text questions | final top 3 | 12 candidates | query expansion ON

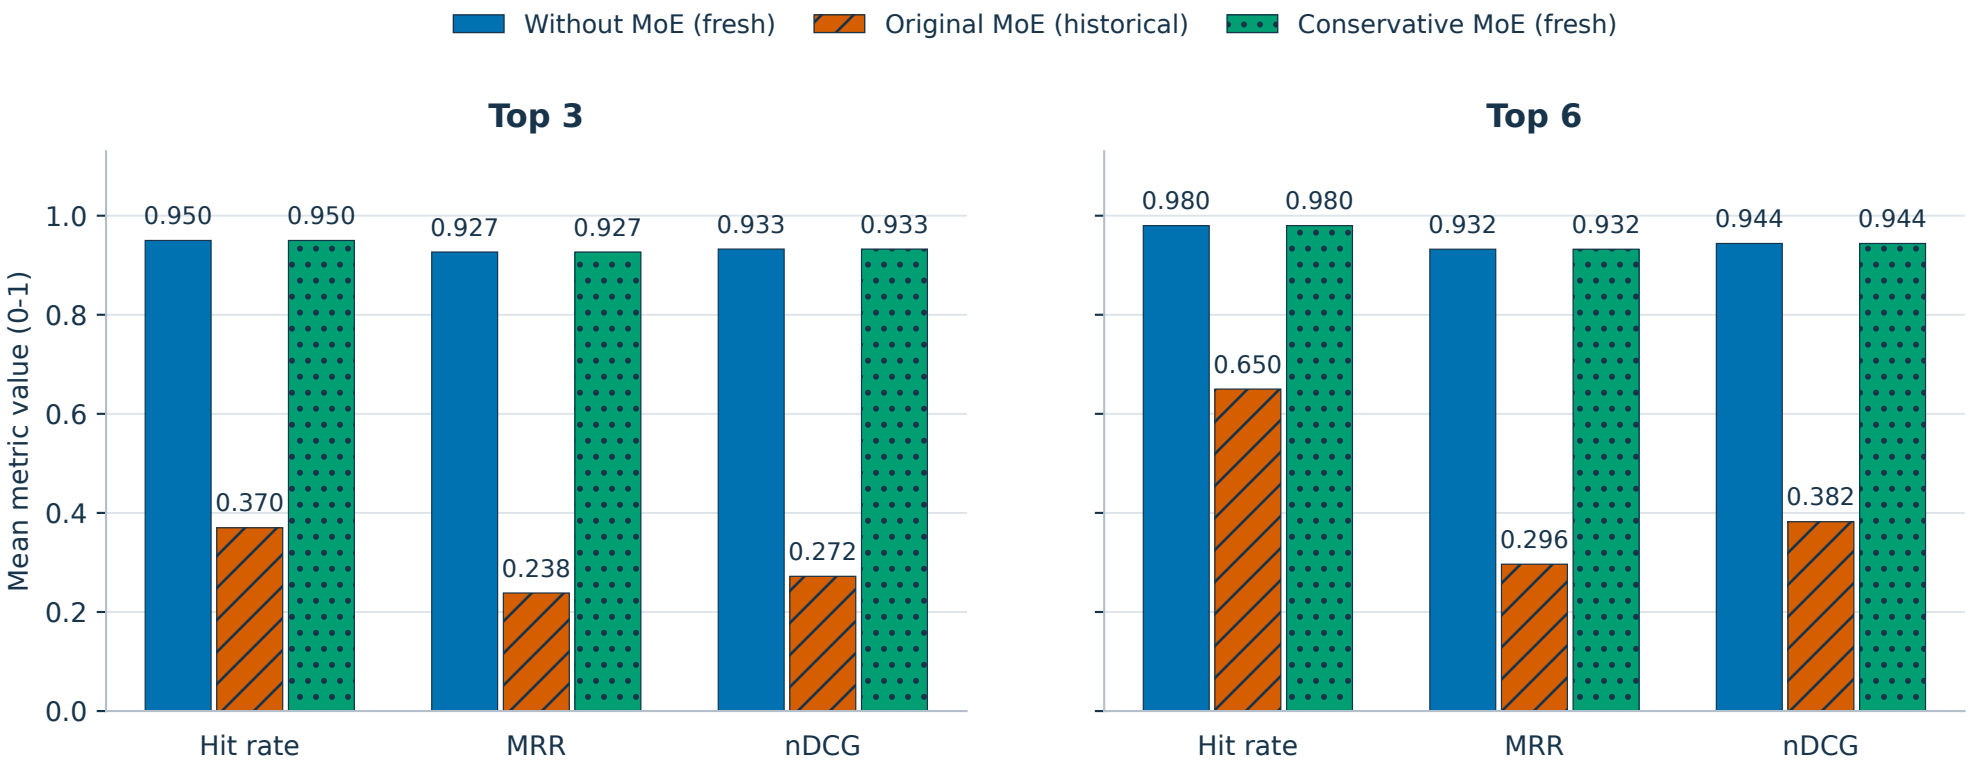

Conservative MoE preserves baseline top-3/top-6 evidence; equal answer quality is expected by design.

Descriptive results on a previously inspected benchmark; no claim of MoE superiority.

Text evidence retrieval at top 3 and top 6

100 text questions / 95 source groups | identical candidate budgets and cached query expansions

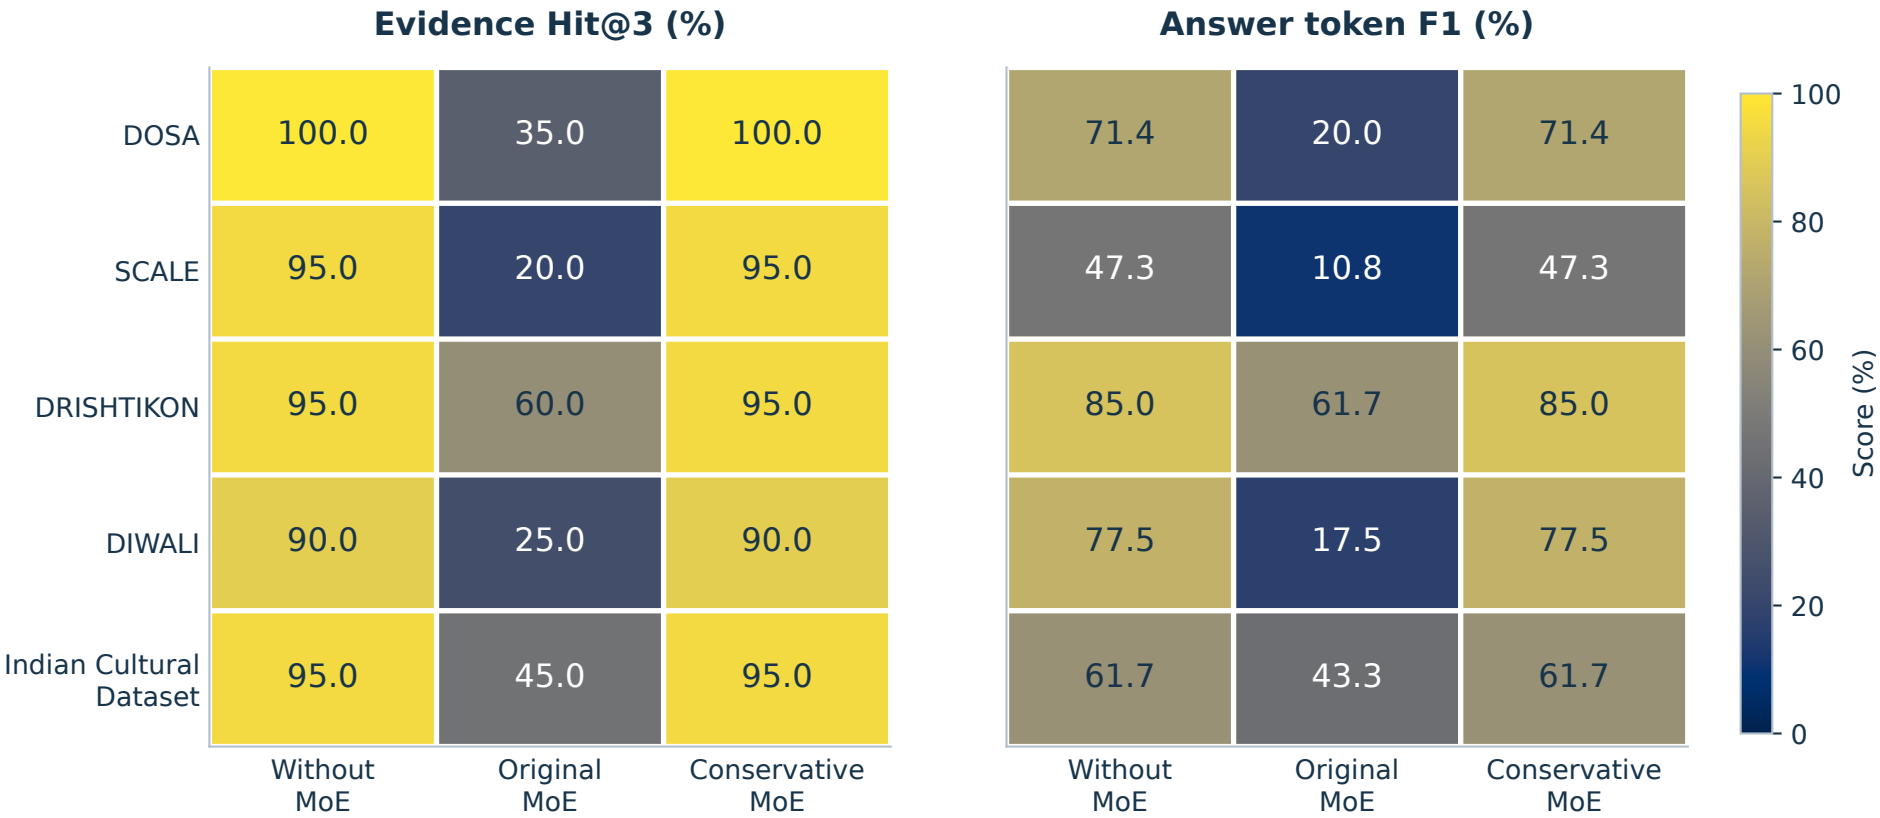

Known positive evidence labels are incomplete; these are not exhaustive corpus relevance judgements.

Descriptive results on a previously inspected benchmark; no claim of MoE superiority.

Text performance by labelled source dataset

20 questions per dataset | all five datasets searched for each question | final top 3

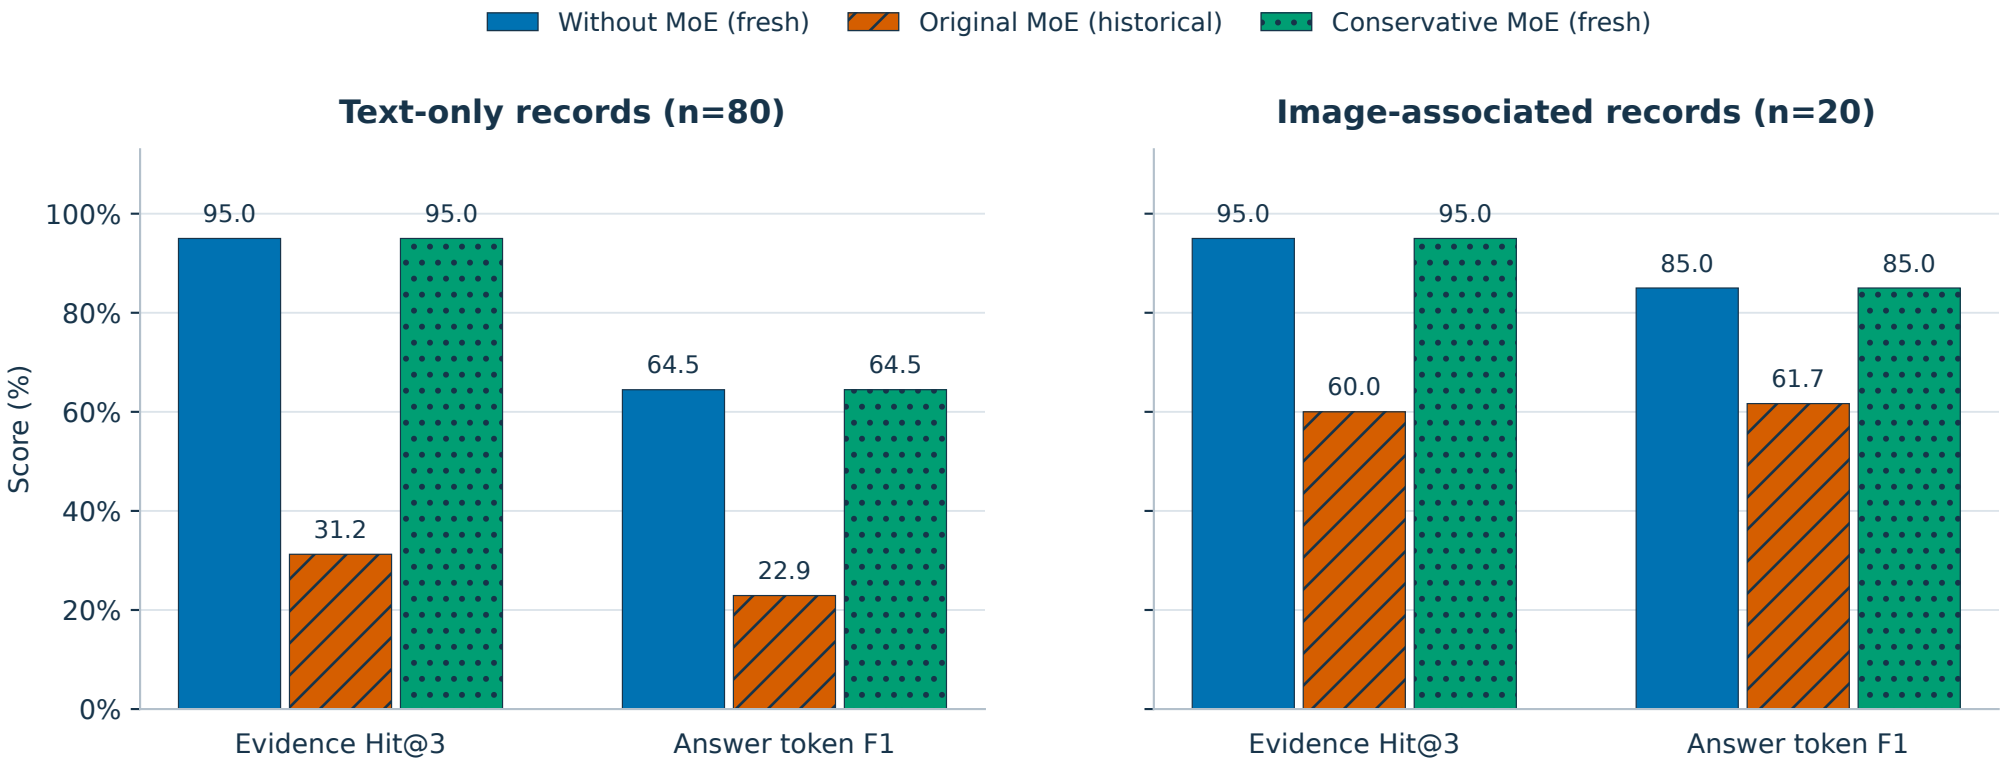

Indian Cultural Dataset: 20 questions from 15 source groups. Others: 20 questions from 20 groups each.

Original MoE: historical run. Baseline/conservative MoE: fresh run. Baseline quality matched across runs.

Text questions with and without associated images

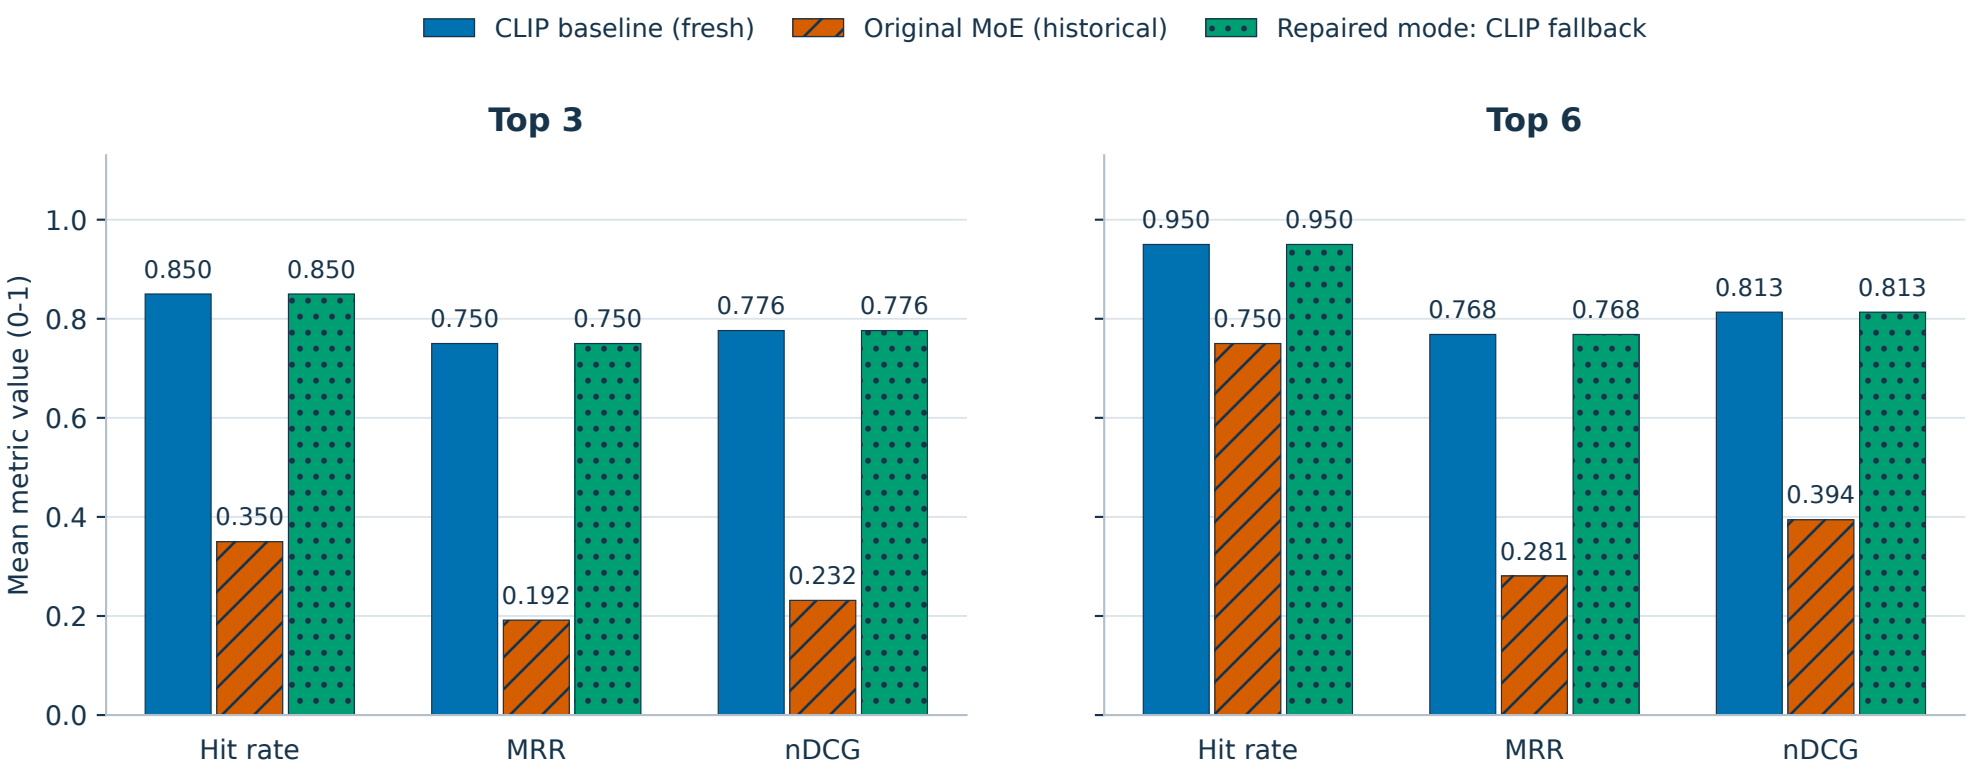

Image-associated text QA is separate from the 20 image-only retrieval queries

Available image features were enabled in matched validation. Each panel groups questions by labelled source.
Descriptive results on a previously inspected benchmark; no claim of MoE superiority.

Image retrieval: repaired mode uses CLIP fallback

20 image queries | 12 CLIP candidates | no query expansion or answer reader

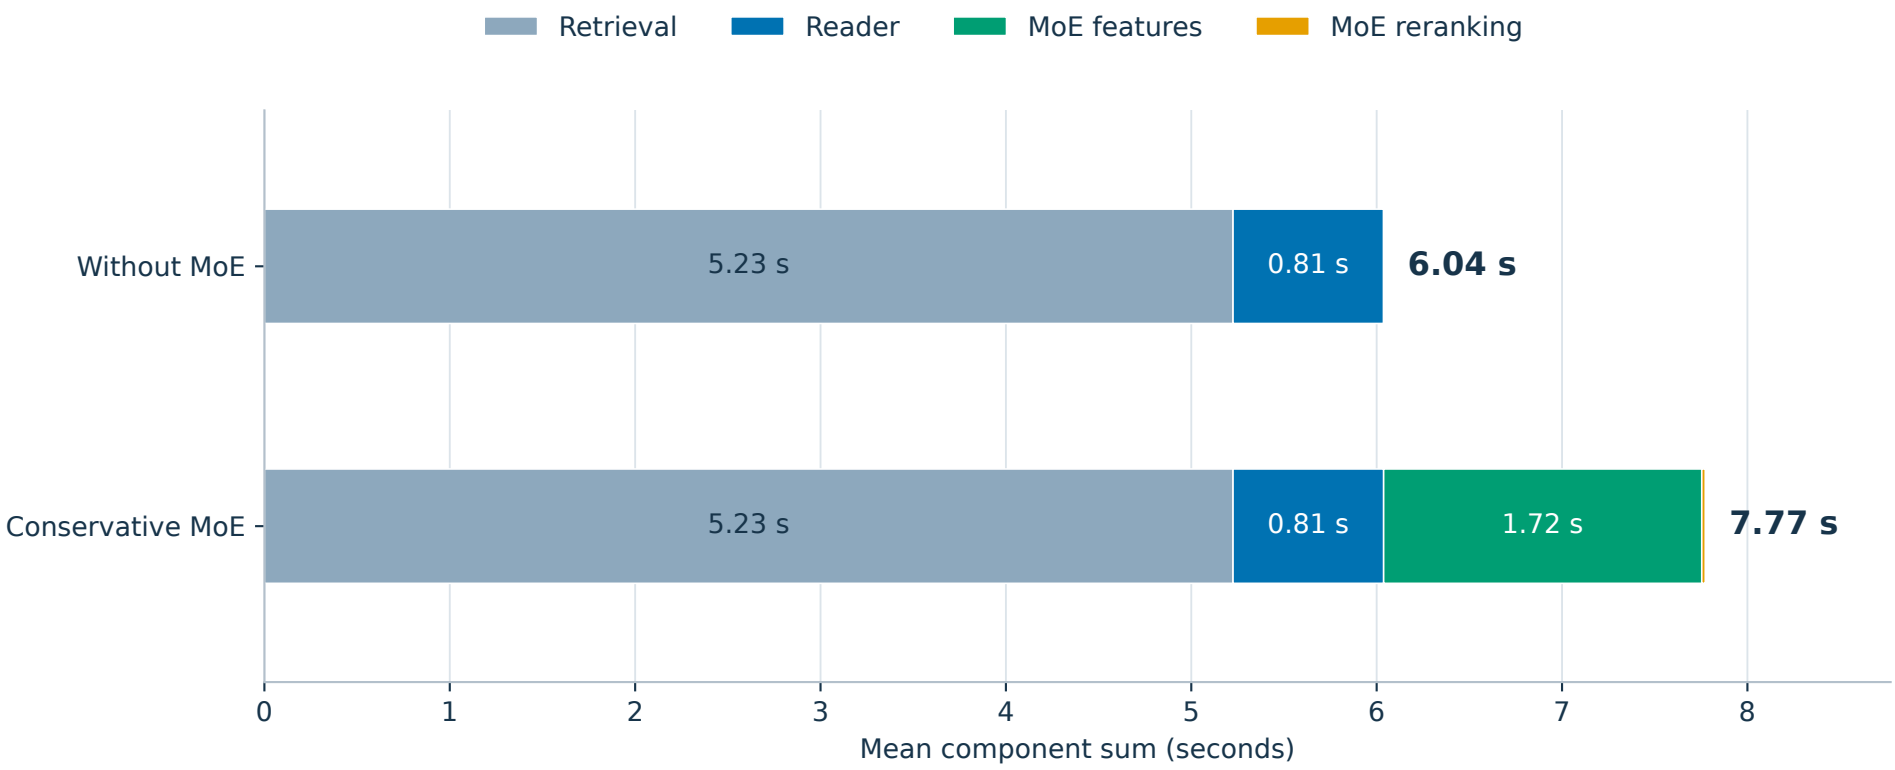

Equal image scores are a fallback result, not an improvement from image MoE.

Descriptive results on a previously inspected benchmark; no claim of MoE superiority.

Equal answer quality costs an extra 1.73 seconds per text question

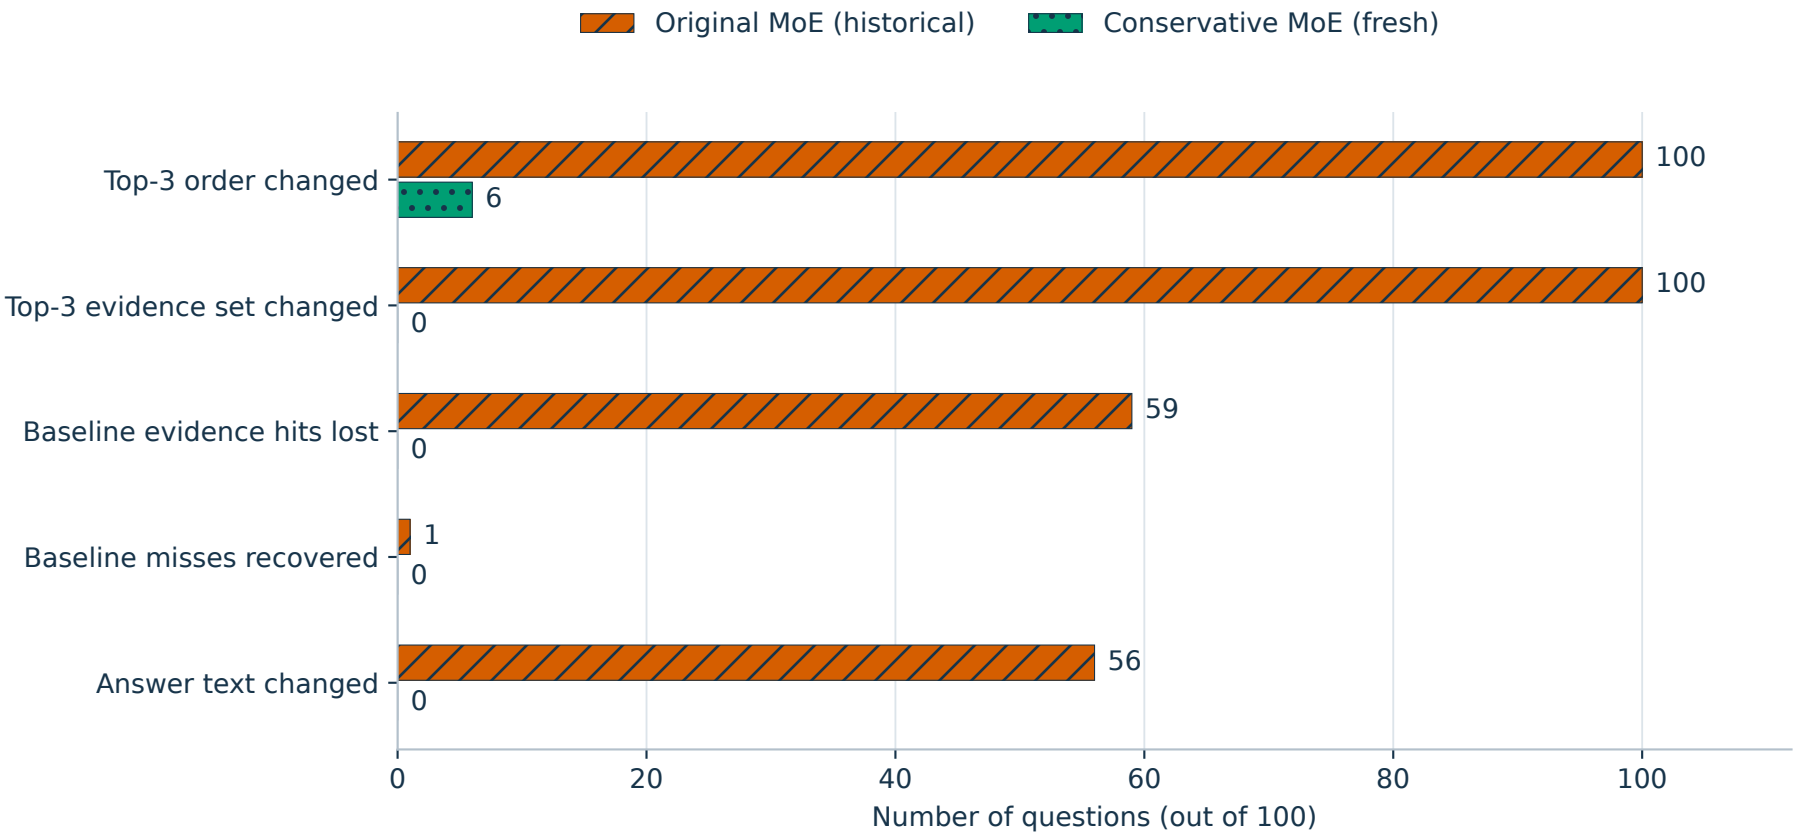

Fresh run only | 100 text questions | final top 3 | mean measured processing components

Shared retrieval/reader measurements; component sums are not independently timed end-to-end latencies.
Model startup and new API paraphrase generation are excluded. Timings are specific to this machine/run.

What changed when MoE reranked the evidence?

100 text questions | changes relative to each run's baseline | final top 3

Conservative MoE changes near-tie order but cannot replace baseline top-3/top-6 evidence.

An answer change is not necessarily an error. Hit losses/recoveries use the known positive evidence labels.

Example answer output from the completed runs

Which beach in Visakhapatnam is described as a venue for Navy air shows?

WITHOUT MoE
Fresh run

ANSWER

Rushi konda beach

Reader score: 0.1087

TOP-3 EVIDENCE

1. DOSA#2
2. DIWALI#1371
3. DRISHTIKON#217

ORIGINAL MoE
Historical run

ANSWER

Kerala

Reader score: 0.2773

TOP-3 EVIDENCE

1. DOSA#330
2. DRISHTIKON#2124
3. DOSA#2

CONSERVATIVE MoE
Fresh run

ANSWER

Rushi konda beach

Reader score: 0.1087

TOP-3 EVIDENCE

1. DOSA#2
2. DIWALI#1371
3. DRISHTIKON#217

SUPPORTING SOURCE: DOSA#2

Artifact: Rushi konda beach. Description: A tourist beach in Vishakhapatnam. Navy air show takes place.

The original MoE kept the correct record but the reader chose a more confident distractor answer.

Rendered saved outputs, not a terminal screenshot. Reader scores are not calibrated correctness probabilities.
